THE EFFECT OF MUROTTAL QUR'AN THERAPY ON CHANGES IN BLOOD PRESSURE IN THE PREVENTION OF EMERGENCY HYPERTENSION PATIENTS	
ABSTRACT <i>Hypertension is a disease of the heart and blood vessels characterized by increased blood pressure. Based on preliminary studies, there is a high incidence of hypertension patients at RSK Heart and Surgery Bangkalan. The purpose of the study is to analyze the effect of murottal qur'an therapy on changes in blood pressure in the emergency prevention of hypertensive patients at RSK Heart and Surgery Bangkalan.</i> <i>This type of research was a Quasy Experiment with a Pre test - Post Test With Control Group Desaign approach. The independent variable was murottal qur'an therapy, the dependent variable was blood pressure change. The population was 62 hypertensive patients with a sample of 18 respondents using random sampling. The instruments used are SOP (Standard Operating Procedure) murrotal qur'an therapy, Mozart classical music therapy and syphygmomanometer and stethoscope. Statistical tests using wilcoxon and mann whitney tests with α 0.05.</i> <i>Based on the results of the wilcoxon test in the treatment group, the P value $(0.000) \leq \alpha$ 0.05 means that there was a difference in murrotal qur'an therapy in patients with hypertension before and after being given mozart classical music therapy, in the control group, the P value $(0.000) \leq \alpha$ 0, 05 means that there was a difference in classical Mozart music therapy in patients with hypertension before and after without being given classical Mozart music therapy, mann whitney results in the treatment and control groups p value $(0.000) \geq \alpha$ 0.05 means that there was an effect of murottal qur'an therapy on changes in blood pressure on the prevention of emergencies in hypertensive patients.</i> <i>Researchers suggest that hypertensive patients can use non pharmacological treatment as support such as murottal qur'an therapy in preventing emergencies in hypertensive patients which can reduce blood pressure</i>
